

Redefining EHR for Behavioral Health

Meeting the Unique Needs of Mental Health, IDD, and Substance Use Disorder Organizations

Discover how Core's Cx360 EHR helps organizations just like yours tackle the industry's changing demands.

Easy-to-Use

Cloud-based platform with synchronized mobile technology breaks down access barriers. Our modular design enables easy configuration and scaling to meet your organization's exact needs.

Efficient

Work faster and smarter with an embedded workflow engine that guides clinicians in providing evidence-based care. A Process Tracking Dashboard ensures compliance, quality-related activities, and treatment plans are completed on time and steps are not overlooked.

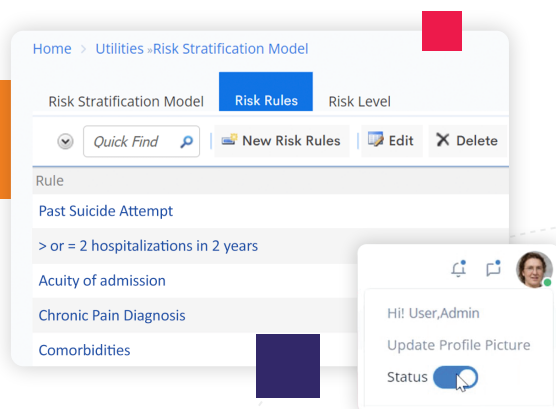

Better Decisions for Better Results

More fully understand the needs of your client population and operations, with real-time dashboards delivering actionable insights into quality measures and performance.

Discover the Cx360 Behavioral Health EHR from Core Solutions

**For the Unique Needs of Mental Health, IDD,
and Substance Use Disorder Organizations**

Intuitive, Modern Platform

- Guided workflows, clinical decision support, and automated task triggering bring new levels of effectiveness to your processes
- Embedded telehealth increases client access and eliminates the need to work in two systems

Ready Out-of-the-Box

- Interoperable, modular design ensures simple training and scaling
- Fully configurable with pre-populated, role-based templated workflows and dashboards, so getting started is easy

Client Centric

- Secure client portal reduces clinician burden by facilitating easy sharing of test results, prescriptions, and exchanging of assessments and other screenings
- Self-serve functionality empowers clients with control over their healthcare data with easy appointment scheduling, registration, and real-time notifications

Cx360

Improved Outcomes

- Best-practice behavioral health templates enable you to easily create workflows that align with efficient, evidence-based care
- Risk stratification easily identifies and prioritizes treatment based on mental health status to meet client needs

Maximizing Revenue Capture and Value-based Reimbursement

- Stop submissions of bad claims using automated revenue capture and billing statement generation with built-in rules
- Fully supports value-based and risk-based payment arrangements
